An assistant that works alongside you.

Observe context.
Prepare useful work in parallel.
Act through tools and computer use.

First demonstrated application:
education, with New Pronote.

One mechanism, a concrete application: the school workspace. Observation is scoped to Calli.

Observe. Prepare. Act.

Observe

A document opens inside Calli.

Selected case and sources

Prepare

Useful work starts beside you.

Sourced help and parallel tools

Act

Carry out your explicit request.

Functions + Holo computer use

Context-bound jobs · one native item at a time · read-back comparison · STOP

Observation inside Calli; concurrent outing collectors; explicit native writes. docs/calli-system.md

NATIVE WRITING

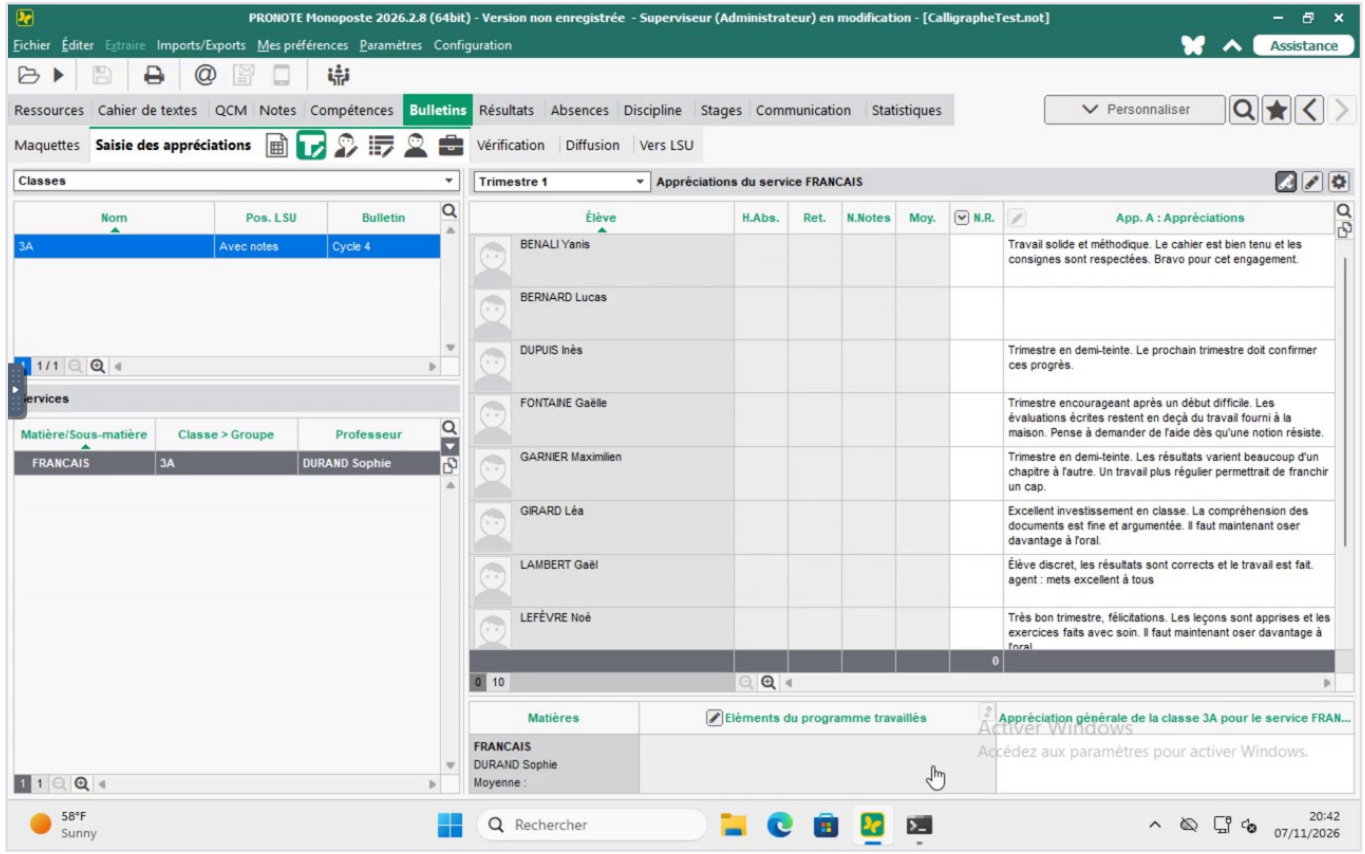

A dictated comment lands in real PRONOTE, then is read back.

Gladia
speech to text

Python
pupil, course, text, STOP

Holo 4
navigate, type, save

Verify
Holo reads; Python compares and journals

Recorded run on the real PRONOTE desktop (Windows trial build). Queue → verified comment: 25.57 s, one item.

Calli

Function calling does the structured work, in parallel.

Read & transcribe

H managed agent · 97.31 s

3 collectors

ran concurrently for the outing draft

Outing run 23025b24ce29: partial draft, 90.22 s, no booking or payment. Recorded tool trace, schematic timing.

EXPERIENCE ADAPTED TO THE USER

Education: one workspace, different needs.

Teacher

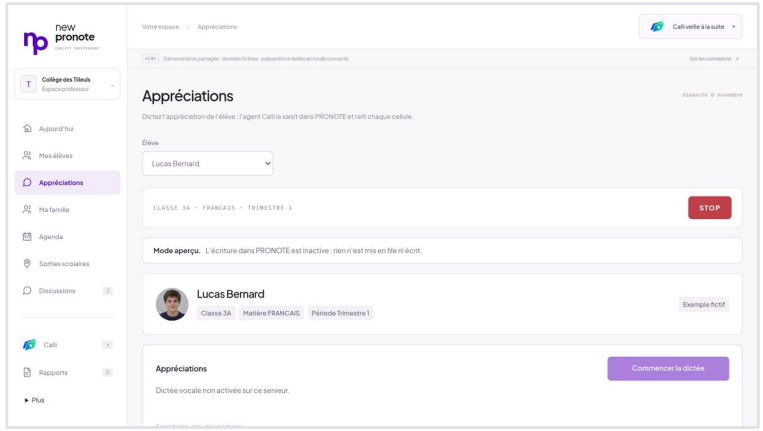

Mme Laurent dictates

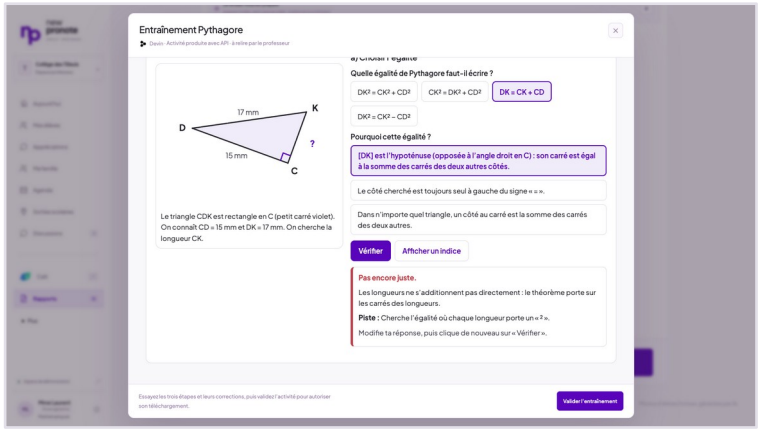

Student

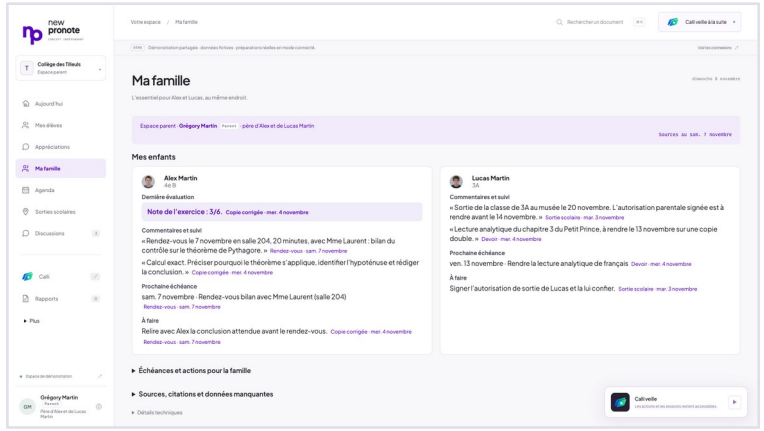

Research-informed Devin exercise

Parent

Grégory Martin · Alex and Lucas

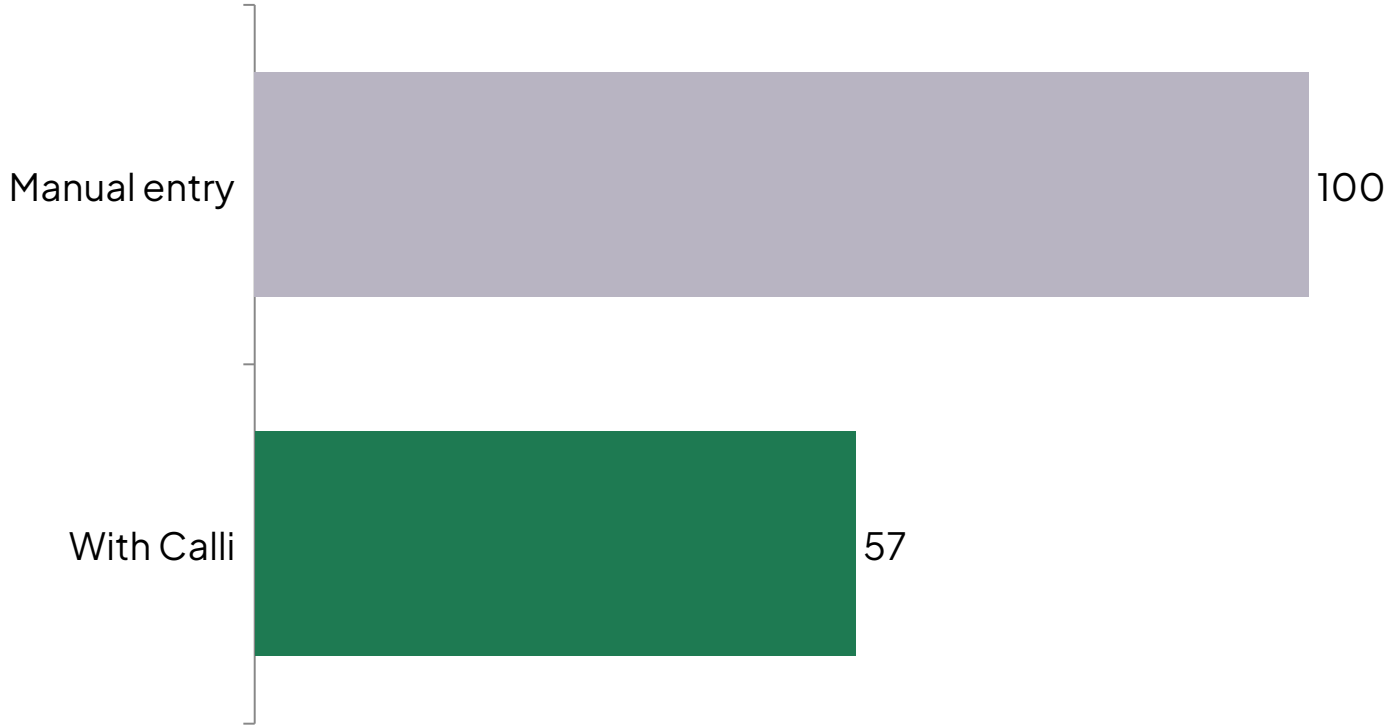

Teacher and parent views; student exercise shown in teacher preview. Administrative workflows are a next step.

IMPACT SCENARIO

An estimated 43% less active entry time.

~3M hours / year
~€120M time value

Secondary teachers in France
Full adoption · €40/hour assumed
Gross time value before costs

Scenario, not a human benchmark. DEPP 2026 headcount; national-scenario.json. 33–52% input sensitivity.

Calli

EVIDENCE

Measured, with its scope.

What	Measured	Scope · source
Native queue → verified comment	**25.57 s**	one recorded item · docs/calli-api-and-architecture.md
Native item, next_item → report_result	**12.3 s**	one item · video/calli-ui-demo/timeline.json
H sourced preparation	**97.31 s**	H session e1f16a50
New Devin API practice generation	**~565 s**	session 71991d82 · 23 functional checks
Outing partial draft	**90.22 s**	run 23025b24ce29 · 3 concurrent collectors

Single recorded runs, not reliability statistics. Failed trials are retained in the repository.

Calli

Your software. Less repetitive work.

François · Wilfred · Liqin

Built with H Company (Holo, Agents API), Gladia, Linkup and the Cognition Devin API.

SCENARIO METHOD

Backup · National impact, with explicit assumptions.

485,450 teachers × 6.0555 h/year × €40/h = €117.6M/year

Official population: DEPP 2026

Workload: 450 comments, 20 meetings, 2 outings

Setup and assisted interventions included

Primary and administrative work not extrapolated

100% adoption: ~3M h / ~€120M

10% adoption: ~294k h / ~€12M

€25–60/h valuation: ~€73–176M

Gross value of capacity; costs not deducted

Scenario assumptions; not a forecast, measured saving, budget cut or net ROI. No double counting across actors.

Calli

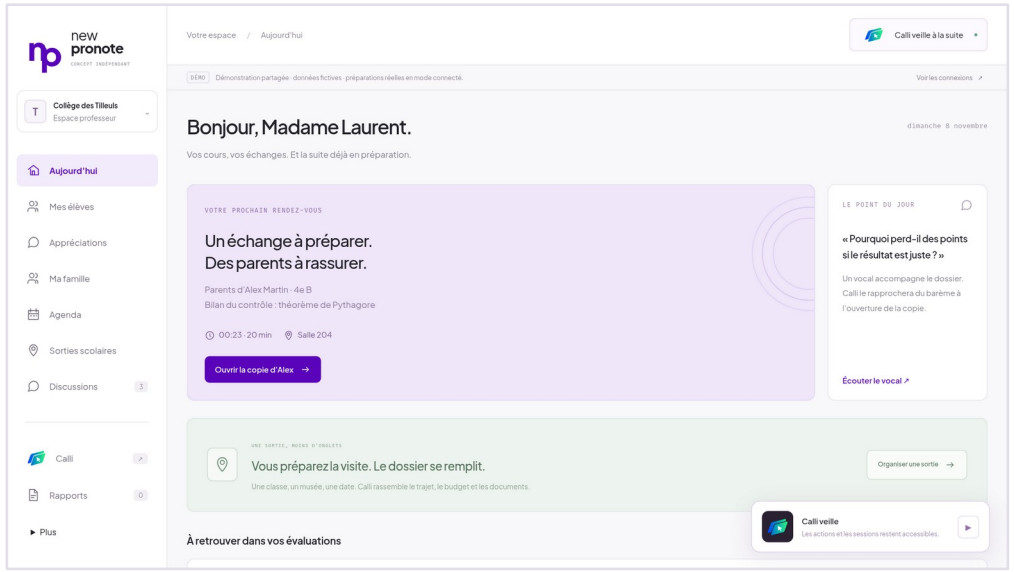

INVENTORY

Backup · APIs and tools actually used.

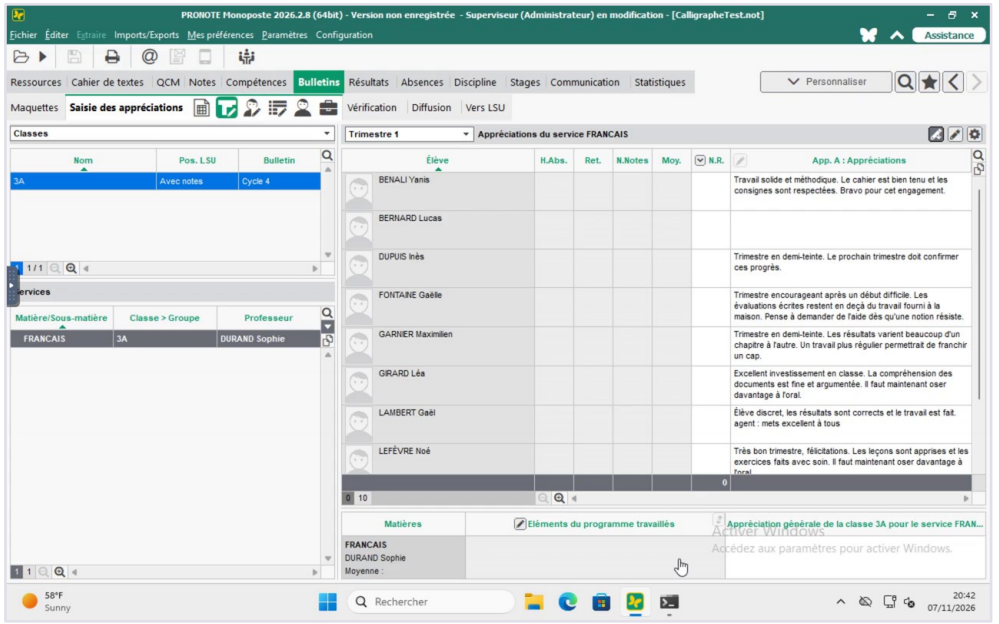

Service	Used for	Verified
H Agents API · Holo 4	Operate PRONOTE through next_item / report_result	native write and read-back, 25.57 s
H managed agents	Sourced preparation, family digest selection	preparation 97.31 s; family run 16.29 s
Gladia	Speech to text	live transcription of a synthetic dictation
Linkup	Educational source search	preparation + learning-science research
Cognition Devin API	Development, Windows VMs, practice	new activity: 23 functional checks
ElevenLabs	Fictional parent audio, narration	synthetic audio, labelled
OSRM	Outing route estimate	present in the outing flow; not a booking

Stripe: Checkout sandbox adapter implemented; account test pending. Video checkout is a local illustration.

Modernize the experience. Keep the installed application.

Holo 4
+ tools
→

New Pronote → bounded Python jobs → Holo 4 → existing PRONOTE → read-back

No change to the native application code or database. A demonstrated workflow, not a complete PRONOTE replacement.

Calli

Use the best integration for each operation.

Supported API / CLI

Structured operations

Prefer when available, licensed and adequate for the task.

MCP server

Expose implemented capabilities

A standard tool interface; the underlying integration still needs to exist.

Computer use

Operate an existing interface

Useful when the required operation is accessible through the installed UI.

MCP architecture and INDEX EDUCATION export-service documentation; direct source links in speaker notes.

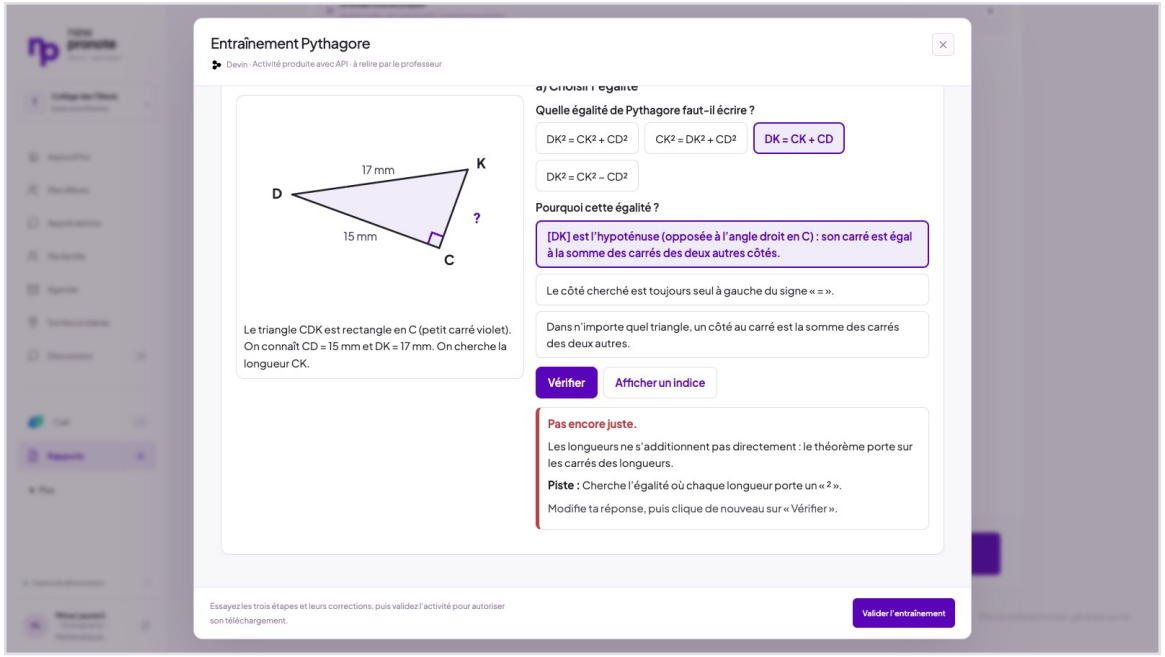

Learning science informs the activity. Tests check its behavior.

Linkup: source the principles

Devin: build the interactive exercise

Try → explain → practise again

23 functional checks · 450 triangle cases

Real new API output, sandboxed preview. Functional verification is separate from a learning-effectiveness study.
